

## You are invited to the 2013 Robotics Festival!

On the weekend of **May 11th & 12th**, the Ann Arbor Hands-On Museum will be hosting its first Robotics Festival in partnership with Team 3641, The Flying Toasters. Your team has been selected as an exhibitor if you choose to accept. Attending teams, please bring your robots from the 2013 season along with any additional presentation materials. Please limit your team's pit to a 7' x 7' frame.

At the event, there will be hourly presentations on the upstairs staging area for teams speak about how they run things, show recorded footage of real FRC tournaments, and hold Q&A sessions for visitors. If your team is interested in giving a presentation, please construct an outline of the presentation content and forward it to **[southlyonrobotics@gmail.com](mailto:southlyonrobotics@gmail.com)** for review prior to the event.

Is your team interested in helping to design and construct a VEX challenge for visitors to actively participate in? If so, please contact Team 3641 immediately. We would love to begin the game design process as soon as possible.

We are hoping to set up game field components at the museum for teams to demonstrate their robots and hold unofficial matches. If your team has field components which are easily transported and reassembled, please notify us ahead of time to coordinate which groups provide which pieces.

Additional details will be released via email closer to the event's date, including loading and unloading procedures, check-in & shift information, and promotional materials to disperse throughout your school and community. Please keep your eyes open for new messages.

We look forward to running this event, and we hope to see you there!
