

You are invited to the 2013 Robotics Festival!

On the weekend of **May 4th & 5th**, the Michigan Science Center will be hosting its FIRST Robotics Festival in partnership with Team 3641, The Flying Toasters. Your team is invited to be an exhibitor at this unique event! Attending teams, please bring your robots from the 2013 season along with any additional presentation materials. Please limit your team's pit to an 8' x 8' OR 4' x 4' frame. Pit size **MUST** be specified upon reservation. To reserve your team's slot, please email us at **southlyonrobotics@gmail.com**

At the event, there will be hourly presentations in the downstairs staging area for teams to speak about how they run things, show recorded footage of real FRC tournaments, and hold Q&A sessions for visitors. If your team is interested in giving a presentation, please construct an outline of the presentation content and forward it to southlyonrobotics@gmail.com for review prior to the event.

Is your team interested in creating and hosting interactive robotics activities? Please draft up your team's ideas and submit them through email for review prior to the event.

We are hoping to set up a full-size FRC competition field at the venue, so please ensure that your robot is capable of competing, or state in your reservation email that it will be for demonstrations/display only. There will be designated battery charging stations available near the pits.

Additional details will be released via email closer to the event's date, including loading and unloading procedures, check-in & shift information, and promotional materials to disperse throughout your school and community. Please keep your eyes open for new messages.

We look forward to running this event, and we hope to see you there!

—The Flying Toasters
