This code assumes that the particle measurements are ...

0. The measure to sort and filter by
1. The particle area
2. Bounding box left
3. Bounding box top
4. Bounding box right
5. Bounding box bottom
6. Center X
7. Center Y

It calculates the output scores for each particle.

Check that widths are similar, particles are close to one another, large is above, and aspect ration is reasonable
