

NON-ENGINEERING ROLES

An aspect of Bedford Robotics that probably does NOT come to mind when someone mentions joining a high school robotics team.

If you've never witnessed the diversity and excitement of a FIRST® Robotics Competition, then let me tell you that building a robot is just the beginning.

In the real world, the engineers of a company usually do not need to *market* the products they work with or create, nor do they manage the company's finances. Each aspect of a business is handled by different departments, who all work together to create and sell products or services.

FIRST® promotes this same type of teamwork by encouraging teams to focus on more areas than just programming and mechanical work, such as: Web design, Fundraising, 3D Design, even Team Spirit! So stop by the next Bedford Robotics meeting listed below to see how you can be a part of our team.

We're not just about building robots; we're about building a team.
