

LEARN ABOUT

What is TWIST?

TWIST (Together, Women in STEM Thrive) is a FIRST Robotics Off Season Competition with a twist, creating an empowering and inclusive environment for girls to take their skills to the next level as teams are required to have an all-girls drive team. This event will be hosted by the Muskego High School Robotics Team WarriorBots at Lake Denoon Middle School on October 14th, 2023 and feature high school robotics teams competing from across the Midwest.

What is an Off Season Competition?

Robotics is a year long activity! FIRST Robotics Competition season runs January to April, but throughout the "off season" between May and December, teams will host competitions locally. Teams use off season competitions to give newer students experience before the actual competition season

What is the Goal of this Event?

This event is dedicated to providing an opportunity for girls to show their strengths in a predominantly male-dominated field. Through this event, we hope to contribute to closing the gender gap in STEM and promoting inclusive team cultures. We are excited to bring a twist to traditional off-season events to inspire women in STEM!
